

TITLE

Simple, Durable and Easy-to-Use Earthworking Machine

ABSTRACT OF THE DISCLOSURE

5 A sod cutter (10) is disclosed including a frame (12) formed by welding the free
edges of mount, frame and end plates (46a, 46b 46c) bent relative to one of two side plates
(46) to the corresponding edges of the other side plate (48). An axle assembly (160) is
pivotal relative to the frame (12) by a depth adjustment lever (198) between a working
position where wheels (16) carried by the axle assembly (160) engage tubular members (168)
slideably and nonrotatably received on a drive shaft (166) and a transport position where the
10 wheels (16) are spaced from the tubular members (168). A U-shaped handlebar (210) is
positionable between an operating position for grasping during operation and a storage
position for lifting and handling. A U-shaped control (212) is pivotably mounted in front of
and above the U-shaped handlebar (210) for actuating the throttle of the engine (18). A
threaded lock (192) provides a connection between the handle mounting tube (180) and the
15 mast (214) of the handlebar (210) and is not threadably removable by a spring pin (196)
extending from the lock (192) and received in a gap defined between the mounting tube
(180) and a locking plate.
